DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 29 August 2007 have been fully considered but they are not persuasive.

Applicant's Arguments

a) Applicant states that newly added limitation of "responsive to a luminance-mapping curve undulating about a point of inflection defined by a neutral point" is not disclosed by Graves.

Examiner's Response

a) The examiner disagrees. As shown in the figures of Graves, the user may include scopes such as a waveform monitor, vectorscope, luminosity histogram, or other graphs (para 0062). Graves also disclosed the luminance graph include the use of midpoints (neutral points) in allowing the system/user to increase/decrease such points in order to make the picture darker/lighter. Thus in the broadest interpretation the user may adjust the mid range points (neutral) wherein the graph would curve/bend based around such point, wherein the graph as shown in 220 would fluctuate (undulate) around such generated graph.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Graves et al., US 2003/0103057.

In considering claims 11-13, 16 and 19-20,

a) the claimed obtaining intensity...is met by color correction window 230 (Fig 2) which allows the user to select/alter/adjust luminance and chrominance values (the claimed variation) and intensity/hue (the claimed intensity).

b) the claimed calculating average and variance...is met where the system computes the mid's and differences of the selected luminance/chrominance value and the luminance/chrominance value of the other pixel.

c) the claimed calculating luminance-contrast adjustment...is met where the system includes "auto-contrast buttons" (para 87, 88, Fig 4).

d-e) the claimed constructing...is met where the system constructs a representation of the color-space whether cylindrically or graphically.

f) the claimed applying...is met where the selected points on the curve/position of the luma and chroma selected are applied to the video signal to map the original pixels.

In considering claims 14 and 17,

Graves discloses the use of LUT's (para 110).

In considering claim 18,

As stated above with respect to claim 11, Graves discloses the use of a cylindrical representation or tables.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date

of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

The Patent Electronic Business Center (EBC) allows USPTO customers to retrieve data, check the status of pending actions, and submit information and applications. The tools currently available in the Patent EBC are Patent Application Information Retrieval (PAIR) and the Electronic Filing System (EFS). PAIR (<http://pair.uspto.gov>) provides customers direct secure access to their own patent application status information, as well as to general patent information publicly available. EFS allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
